

REMARKS

The claims have been amended so as to sharpen their definition of the invention relative to the applied references.

Reconsideration is accordingly respectfully requested, for the rejection of the claims as unpatentable over POPA in view of JOHNSON, or further in view of OVADYA et al.

The present invention comprises a user terminal storing predetermined display style information determined by a display function of each of the plurality of user terminals and specifying a display style of a file to be received from said server, the predetermined display style information corresponding one to one with a display type of each of the user terminal. The memory of the user terminal stores the predetermined display style information. The predetermined display style information corresponds one to one with a display type of each of the user terminal. In other words, the predetermined display style information is standardized based on the display style of the user terminal by vendors of the user terminal, for example the predetermined display style information is stored in the memory before the user terminal is shipped to the user. So it is unnecessary that the users perform excessive operation. For example, it is unnecessary that the users input or select the display style informations. Therefore, the user terminal transmits the predetermined display style information to the

server automatically without the display style information being inputted by the users.

POPA fails to disclose the user terminal storing predetermined display style information determined by a display function of each of the plurality of user terminals and specifying a display style of a file to be received from said server, the predetermined display style information corresponding one to one with a display type of each user terminal. In other words, in POPA, the image file, size, resolution and color are not predetermined information, and are selected by an end user (col. 5, lines 59-61).

JOHNSON fails to disclose a user terminal storing predetermined display style information determined by a display function of each of the plurality of user terminals and specifying a display style of a file to be received from said server, the predetermined display style information corresponding one to one with a display type of each user terminal. In JOHNSON, user information, such as name, address and signature are selected by a user (Figure 4). So the user information of JOHNSON is not predetermined information and is selected by an end user.

OVADOYA merely discloses a customer identification. OVADOYA fails to disclose the above-mentioned features of the present invention.

Thus, POPA and JOHNSON do not teach or suggest the above-mentioned features of the present independent claims. Therefore, the present independent claims are patentable over the cited references.

As the claims as now constituted clearly bring out these distinctions with ample particularity, it is believed that they are all patentable, and reconsideration and allowance are respectfully requested.

The Commissioner is hereby authorized in this, concurrent, and future replies, to charge payment or credit any overpayment to Deposit Account No. 25-0120 for any additional fees required under 37 C.F.R. § 1.16 or under 37 C.F.R. § 1.17.

Respectfully submitted,

YOUNG & THOMPSON
